

Tec Mac Srl produces machines and equipment for two-component resins, exporting over than 90% of our production.

We were the first European company designing a unit capable to meter, mix and dispense two-component adhesive and, since then, we have been specializing in this field for the supply of gluing plant and accessories.

Thanks to our long experience, we developed different dispensing techniques to size our customers' need, shown here below:

Strips over lower coil

Spray over lower coil

Spray over upper coil

Strips over rockwool

Spray over rockwool

Drops spray

Tec Mac Srl produces metering-mixing-dispensing equipment for the gluing of rockwool panels both for continuous and discontinuous process, for primer in the production of PIR panels and for some special applications. We can supply both brand new equipment or retrofitting-improving existing ones.

Double gluing unit for continuous line

Gluing unit for discontinuous line

Curved panel gluing

Line for primer for PIR panels

Doors gluing

Marble panel gluing

Tec Mac Srl produces even accessories for panels producers such as bulk storages, feeding systems, tanks refilling systems, machines for discontinuous process and special applications.

Bulk storage refilling pump

Bulk storage

Refrigerated truck gluing

Catalyst refilling system

Refilling pumps

Automated gluing line for big-size panels
